PEAT POTS To establish young plants when tight schedules do not permit direct benching, use nutrient treated Peat Pots. These pots are molded from 75 per cent Peat and 25 per cent wood pulp, and contain 1.3 per cent Nitrogen, 1 per cent Phosphoric Acid and 1.6 per cent Potash. They are weed and disease free. Plants grow faster and make more vigorous and rapid growth than plants grown in other types of containers. Nutrient treated Peat Pots dry out slower than clay pots, therefore require less frequent watering. Because the roots penetrate the wall of the nutrient treated Peat Pot, there is no knocking out, thereby saving time and labor.
